

Corrigendum: Gray wolf mortality patterns in Wisconsin from 1979 to 2012.

© 2019 American Society of Mammalogists, www.mammalogy.org

In the paper “Gray wolf mortality patterns in Wisconsin from 1979 to 2012” by A Treves, JA Langenberg, JV López-Bao, and MF Rabenhorst (*Journal of Mammalogy* 98:17–32, 2017) the authors found two typographical errors in Supporting Data files SD2 and SD3.

The date of disappearance of radiocollared wolf 61 in Supporting Data files SD2 should be April 1986 (not 2006) so time on the air before disappearance should read 311 days.

Therefore, the estimate of average time to disappearance for all radiocollared wolves that went off the air should be 493 ± 552 days (last sentence of the Results, p.27 in the original). This does not change the qualitative interpretations.

Also, in Supporting Data SD3, the section subtitled “*Reconstructing missing deaths from nonhuman causes and collisions.*” is printed twice. The first of the two is correct with 5080 iterations (not 508) and the second of the two is incorrect.

This error does not change the results or interpretations. The authors apologize for this error.
